## **WebSpy's Reporting Technology to be Showcased at Microsoft's Tech Ed Conference in Amsterdam**

---

WebSpy Ltd today announced that it will be exhibiting at Microsoft's Tech Ed Conference in Amsterdam, July 4-7, 2000.

WebSpy will be exhibiting at the upcoming conference in Amsterdam in conjunction with Microsoft, to promote the release of WebSpy Reporter version 3.1 with support for Microsoft's ISA Server 2000 – an extensible firewall and web cache server that enables secure, fast and manageable Internet connectivity.

Microsoft has acknowledged WebSpy's support of ISA server with a description and link from the Microsoft web site. The official launch of WebSpy Reporter will take place at the show.

WebSpy has enjoyed a successful relationship with Microsoft over the past year through its support of Microsoft Proxy Server. The company will continue to build on this, as well as its relationship with other Microsoft partners, to ensure maximum exposure for the WebSpy product range.

" Our collaboration with Microsoft, first with support for Proxy Server and now with ISA Server, has helped to increase awareness of WebSpy globally. We look forward to working with Microsoft, further increasing our products capacity to add on to ISA Server 2000" says WebSpy's CEO, Jack Andrys.

Tech Ed in Amsterdam will be attended by around 7,500 Developers and IT Professionals. The event will be host to top Microsoft Corporation speakers and selected Industry experts to deliver over 250 sessions over four full days.

WebSpy is also planning to exhibit at the forthcoming Tech Ed Conference in Cairns, Australia 6-9 August.
